## Revision History

Version	Description	Date
V1.0.0	Initial release.	March 22, 2019
V1.0.1	<ol style="list-style-type: none"><li>1. Changed Easyset picture.</li><li>2. Modified Acuread Decoding as Acuscan.</li><li>3. Modified Multiple point to point as Multi-point to Single-point</li><li>4. Added notes of Bluetooth HID Keyboard in Chapter 4</li><li>5. Added Set Scanner Name in Chapter 4</li><li>6. Added Datalogic Magellan Aux-RS232 in Chapter 5</li><li>7. Added Query Bluetooth Hardware Version and Query Cradle Bluetooth Hardware Version in Chapter 3</li><li>8. Added Comparison Command in Chapter 8</li><li>9. Added DotCode in Chapter 7</li><li>10. Deleted Specific OCR-B in Chapter 7</li></ol> <p>Note: Firmware version HR52-BT_V1.01.016 or later is required for the new feature above.</p>	June 22, 2020
V1.0.2	<ol style="list-style-type: none"><li>1. Revised Set Date and Time in the Chapter 4.</li><li>2. Added RS-232 barcode in the Chapter 6.</li><li>3. Revised Notes in Operating Modes in the Chapter 4.</li></ol>	Oct 23, 2020

# Preface

## Introduction

This manual provides detailed instructions for setting up and using the NLS-HR52 wireless 2D barcode scanner (hereinafter referred to as “**the HR52**” or “**the scanner**”) and NLS-CD52 cradle (hereinafter referred to as “**the CD52**” or “**the cradle**”).

## Chapter Description

<i>Chapter 1 Getting Started</i>	: Gives a general description of HR52 scanner and CD52 cradle.
<i>Chapter 2 EasySet</i>	: Introduces a useful tool you can use to set up HR52 scanner and develop new applications.
<i>Chapter 3 System Settings</i>	: Introduces three configuration methods and describes how to configure general parameters of HR52 scanner.
<i>Chapter 4 Wireless Communications</i>	: Describes how to configure the parameters necessary for wireless communication between the scanner, cradle and host device.
<i>Chapter 5 RS-232 Interface</i>	: Describes how to configure RS-232 communication parameters.
<i>Chapter 6 USB Interface</i>	: Describes how to configure USB communication parameters.
<i>Chapter 7 Symbologies</i>	: Lists all compatible symbologies and describes how to configure the relevant parameters.
<i>Chapter 8 Data Formatter</i>	: Explains how to customize scanned data with the data formatter.
<i>Chapter 9 Prefix &amp; Suffix</i>	: Describes how to use prefix and suffix to customize scanned data.
<i>Chapter 10 Batch Programming</i>	: Explains how to integrate a complex programming task into a single barcode.
<i>Appendix</i>	: Provides factory defaults table and a bunch of frequently used programming barcodes.

---

## Explanation of Icons

This icon indicates something relevant to this manual.

This icon indicates this information requires extra attention from the reader.

This icon indicates handy tips that can help you use or configure the scanner with ease.

This icon indicates practical examples that can help you to acquaint yourself with operations.

# Chapter 1 Getting Started

## Introduction

The HR52 wireless 2D barcode scanner reads a 1D or 2D barcode by capturing its image. Adopting the advanced **UIMG** technology independently developed by Newland Auto-ID Tech, it provides five scan modes, including Level mode, Sense mode, Continuous mode, Pulse mode and Batch mode, tailored to different scanning needs.

An illustrated introduction to the HR52 is included in this chapter. If you have an HR52 scanner at hand, make good use of it to develop a better understanding of this manual. This chapter is written for normal users, maintenance staff and software developers.

## Features of the HR52

- More reliable, more versatile, more efficient scanning solution
- Bluetooth 5.0 radio
- User-friendly illumination & aiming
- Ultra-rugged construction
- Flexible mounting of cradle

## Unpacking

Open the package and take out HR52 scanner and its accessories. Check to make sure everything on the packing list is present and intact. If any contents are damaged or missing, please keep the original package and contact your dealer immediately for after-sales service.

---

## HR52 Scanner

### **Good Read/Network LED:**

Red LED flashes - Low battery alert.

Red LED on - Scanner not paired to cradle.

Blue LED flashes slowly - Paired but no connection established.

Blue LED on - Connection established.

Blue LED flashes quickly - Batch transmission in progress.

Green LED flashes once - Good read.

---

**Dimensions of the Scanner (unit: mm)**

## CD52 Cradle

### Red/Green LEDs:

Red LED on - No scanner placed on cradle.

Red LED flashes - Charging in progress, low battery level.

Green LED flashes - Charging in progress, medium battery level.

Green LED on - Fully charged.

### Data Port Pinouts:

PIN	Signal	Type	Function
1	NC	-	No connection
2	NC	-	No connection
3	VCC	P	Power+ (+5V)
4	TXD	O	RS-232 output
5	RXD	I	RS-232 input
6	CTS	I	Flow control signal
7	RTS	O	
8	GND	P	Ground
9	D-	I/O	USB signal
10	D+	I/O	

---

**Dimensions of the Cradle (unit: mm)**

---

## Mounting the Cradle

The CD52 cradle can be set up in a horizontal or vertical position. Choose a mounting position that fits your need.

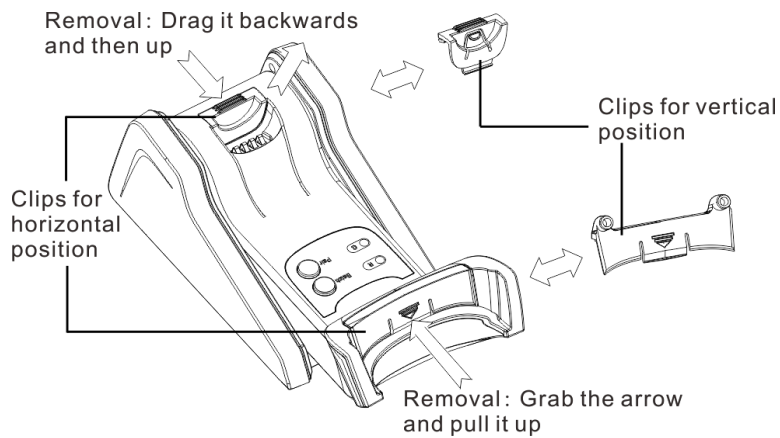

### Horizontal Mount

The cradle is originally assembled in the horizontal position, as shown below.

### Vertical Mount

1. Remove the clips from the horizontal cradle and then attach the clips for vertical position to the corresponding spots on the cradle.

---

2. Grab and pull the right board horizontally away from the cradle. Then remove the main piece.

3. Insert the protruding part on the left side of the main piece into the groove on the left board, so that the main piece is vertical. Attach the right board to the main piece.

---

## Wall Mount

1. Remove the plate from the chassis by pressing the plastic clip F in with an appropriate tool.

2. Install the two plastic wall anchors in a wall and use screws to secure the plate to the wall with its A side facing the wall. Slide the vertical cradle onto the plate.

---

## Connecting the Cradle to a Host

The cradle can be connected to a host in actual application, such as PC, POS or any intelligent terminal with USB or RS-232 port, using a communication cable (USB or RS-232 cable).

### USB

### RS-232

**Note:** Please check the port on the host and purchase the cable accordingly.

## Using USB Cable

Connect the cradle to a Host using a USB cable with RJ45 and USB connectors:

1. Plug the RJ45 connector of the cable into the data port on the cradle.
  2. Plug the USB connector of the cable into the USB port on the Host.
  3. Plug the supplied power adapter into the power jack on the cradle.
-

---

## Using RS-232 Cable

Connect the cradle to a Host using an RS-232 cable with RJ45 and RS-232 connectors:

1. Plug the RJ45 connector of the cable into the data port on the cradle.
2. Plug the RS-232 connector of the cable into the RS-232 port on the Host.
3. Plug the supplied power adapter into the power jack on the cradle.

## Charging the Scanner Battery

To charge the scanner battery, insert the scanner in a powered cradle. You can check the charge status with the red and green LEDs on the cradle.

Red LED steady on	No scanner placed on cradle
Red LED flashes	Charging in progress, low battery level
Green LED flashes	Charging in progress, medium battery level
Green LED steady on	Fully charged

---

## Pairing the Scanner to a Cradle

Before configuring or using the scanner, you must pair it to a cradle first. A cradle can pair with up to seven scanners if Multi-point to single-point mode is enabled.

You need to perform the pairing operation manually: After the scanner and cradle are turned on, insert the scanner in the cradle and then press the Pair button on the cradle. The scanner beeps on a successful pairing.

To unpair them, you may pair the scanner to another cradle, or scan the **Clear Pairing Info on Cradle** or **Clear Pairing Info on Scanner** barcode in Chapter 4.

## Searching Paired Scanner(s)

After the scanner(s) and cradle are turned on, press the Pair button on the cradle and the paired scanner(s) will beep.

## Wireless Communications

The scanner can communicate with a remote host using Bluetooth, or by pairing with a CD52 cradle that supports the following interfaces:

- ✧ Standard RS-232 connection to a host. For the cable connection instructions, see the “Using RS-232 Cable” section in this chapter. To learn how to configure RS-232 communication parameters, see Chapter 5.
- ✧ USB connection to a host. For the cable connection instructions, see the “Using USB Cable” section in this chapter. To learn how to configure USB communication parameters, see Chapter 6.

For wireless communication parameters, see Chapter 4.

---

## Power On, Power Off, Reboot

### Power on the scanner

Hold down the trigger on the scanner until it beeps.

Note: When using the scanner for the first time or after scanning the **Battery Off** barcode in Chapter 3, you **MUST** insert the scanner in a powered cradle to exit battery protection mode before turning it on.

### Power off the scanner

**Method 1:** When in the Level scan mode, the scanner will automatically power off after a specific period of inactivity (default: 5 minutes, programmable). To change the period, see the “Auto Power-Off Timeout” section in Chapter 3.

**Method 2:** Scan the **Power Off Scanner** barcode in Chapter 3.

### Reboot the scanner

If the scanner stops responding to input or runs abnormally, press and hold the Reset button on the bottom of the scanner with a straightened paperclip to reboot it.

## Maintenance

- ✧ The scan window should be kept clean.
- ✧ Do not scratch the scan window.
- ✧ Use soft brush to remove the stain from the scan window.
- ✧ Use the soft cloth to clean the window, such as eyeglass cleaning cloth.
- ✧ Do not spray any liquid on the scan window.
- ✧ Do not use any detergent to clean other parts of the device except for water.

The warranty **DOES NOT** cover damages caused by inappropriate care and maintenance.

---

## Scanning Instructions

When the scanner is in the Level scan mode, you can follow the steps below to scan a barcode:

1. Press and hold the Trigger. Then the scanner will project a red aiming pattern.
2. Aim the aiming pattern across the center of barcode.
3. Release the Trigger when the aiming pattern goes off. If the barcode is decoded successfully, the scanner will emit a good read beep and the decoded data will be sent to the Host.

**Note:** For barcodes of the same batch, the scanner keeps a very high success ratio in certain distance which is regarded as the optimal scanning distance.

## Chapter 2 Easyset

EasySet, developed by Fujian Newland Auto-ID Tech. Co., Ltd., is a configuration tool for Newland's 1D/2D handheld barcode scanner, fixed mount barcode scanners and OEM scan engines. Its main features include:

- ✧ View device & configuration information of online device
- ✧ Configure device
- ✧ Update firmware of online device
- ✧ Load/modify existing XML configuration file; save current settings to an XML file
- ✧ Create/print/save programming barcodes to a PDF or Word file
- ✧ View/edit/save image stored on online device in the original image/BMP/JPG/TIFF format
- ✧ Send serial commands to online device and receive device response
- ✧ Supported languages: Chinese and English.

EasySet supports 32-bit/64-bit Microsoft WinXP/Win7/Win 8/Win 8.1/Win 10 operating systems.

EasySet can communicate with device via one of the following interface: RS-232, USB COM Port Emulation (UFCOM driver required), USB CDC (UFCOM driver required), USB DataPipe (UFCOM driver required), USB HID-POS.

Online Device

Offline Device

Command Center

Batch update

@SETUPE1

Enter Setup

## Chapter 3 System Setting

### Introduction

There are three ways to configure the HR52: Barcode programming, command programming and Easyset programming.

### Barcode Programming

The HR52 can be configured by scanning programming barcodes. All user programmable features/options are described along with their programming barcodes/commands in the following sections.

This programming method is most straightforward. However, it requires manually scanning barcodes. As a result, errors are more likely to occur.

### Command Programming

The HR52 can also be configured by serial commands (HEX) sent from the host device.

Users can design an application program to send those command strings to the scanners to perform device configuration.

### EasySet Programming

Besides the two methods mentioned above, you can conveniently perform scanner configuration through EasySet too. EasySet is a Windows-based configuration tool particularly designed for Newland products, enabling users to gain access to decoded data and captured images and to configure scanners. For more information about this tool, refer to the *EasySet User Guide*.

Before programming the scanner, you need to pair it to a cradle first. When programming the scanner with serial commands or EasySet, you need to insert it in the paired cradle.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

## Programming Barcode/ Programming Command/Function

The figure above is an example that shows you the programming barcode and command for the Enter Setup function:

1. The **No Case Conversion** barcode.
2. The **No Case Conversion** command.
3. The description of feature/option.
4. \*\* indicates factory default settings.

Note: "@" included in the programming command indicates permanent setting which means the setting will not be lost by removing power from the scanner or turning off or rebooting it; whereas "#" included in the programming command indicates temporary setting which means the setting will be lost by removing power from the scanner or turning off or rebooting it.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

## Use of Programming Command

Besides the barcode programming method, the scanner can also be configured by serial commands (HEX) sent from the host device. **All commands must be entered in uppercase letters.**

### Command Syntax

*Prefix StorageType Tag SubTag {Data} [,SubTag {Data}] [:Tag SubTag {Data}] [...] Suffix*

**Prefix:** "~<SOH>0000" (HEX: **7E 01 30 30 30 30**), 6 characters.

**StorageType:** "@" (HEX: **40**) or "#" (HEX: **23**), 1 character. "@" means permanent setting which will not be lost by removing power from the scanner or rebooting it; "#" means temporary setting which will be lost by removing power from the scanner or rebooting it.

**Tag:** A 3-character case-sensitive field that identifies the desired command group. For example, all USB HID Keyboard configuration settings are identified with a Tag of KBW.

**SubTag:** A 3-character case-sensitive field that identifies the desired parameter within the tag group. For example, the SubTag for the keyboard layout is CTY.

**Data:** The value for a feature or parameter setting, identified by the Tag and SubTag.

**Suffix:** ";<ETX>" (HEX: **3B 03**), 2 characters.

Multiple commands can be issued within one Prefix/Suffix sequence. For configuration commands, only the **Tag**, **SubTag**, and **Data** fields must be repeated for each command in sequence. If an additional command is to be applied to the same Tag, then the command is separated with a comma (,) and only the **SubTag** and **Data** fields of the additional commands are issued. If the additional command requires a different **Tag** field, the command is separated from previous command by a semicolon (;).

### Query Commands

For query commands, the entry in the **Data** field in the syntax above is one of the following characters means:

- \* (HEX: **2A**)      What is the scanner's current value for the setting(s).
- & (HEX: **26**)      What is the factory default value for the setting(s).
- ^ (HEX: **5E**)      What is the range of possible values for the setting(s).

@SETUPE0

\*\* Exit Setup

@SETUPE1  
Enter Setup

---

The value of the **StoreType** field in a query command can be either “@” (HEX: **40**) or “#” (HEX: **23**).

A query command with the **SubTag** field omitted means to query all the settings concerning a tag. For example, to query all the current settings about Code 11, you should enter **7E 01 30 30 30 30 40 43 31 31 2A 3B 03** (i.e. ~<SOH>0000@C11\*;<ETX>).

## Responses

Different from command sequence, the prefix of a response consists of the six characters of “<STX><SOH>0000” (HEX: **02 01 30 30 30 30**).

The scanner responds to serial commands with one of the following three responses:

<ACK> (HEX: **06**) Indicates a good command which has been processed.

<NAK> (HEX: **15**) Indicates a good configuration command with its **Data** field entry out of the allowable range for this Tag and SubTag combination (e.g. an entry for an inter-keystroke delay of 100 when the field will only allow 2 digits), or an invalid query command.

<ENQ> (HEX: **05**) Indicates an invalid Tag or SubTag command.

When responding, the scanner echoes back the command sequence with the status character above inserted directly before each of the punctuation marks (the comma or semicolon) in the command.

## Examples

**Example 1: Enable Code 11, set the minimum and maximum lengths to 12 and 22 respectively.**

Enter: **7E 01 30 30 30 30 40 43 31 31 45 4E 41 31 2C 4D 49 4E 31 32 2C 4D 41 58 32 32 3B 03**  
(~<SOH>0000@C11ENA1,MIN12,MAX22;<ETX>)

Response: **02 01 30 30 30 30 40 43 31 31 45 4E 41 31 06 2C 4D 49 4E 31 32 06 2C 4D 41 58 32 32 06 3B 03**  
(<STX><SOH>0000@C11ENA1<ACK>,MIN12<ACK>,MAX22<ACK>;<ETX>)

**Example 2: Query the current minimum and maximum lengths of Code 11.**

Enter: **7E 01 30 30 30 30 40 43 31 31 4D 49 4E 2A 2C 4D 41 58 2A 3B 03**  
(~<SOH>0000@C11MIN\*,MAX\*;<ETX>)

Response: **02 01 30 30 30 30 40 43 31 31 4D 49 4E 31 32 06 2C 4D 41 58 32 32 06 3B 03**  
(<STX><SOH>0000@C11MIN12<ACK>,MAX22<ACK>;<ETX>)

@SETUPE0  
\*\* Exit Setup

@SETUPE1

**Enter Setup**

## Good Read LED

The green LED can be programmed to be On or Off to indicate good read.

@GRLENA1  
**\*\* On**

@GRLENA0  
**Off**

## Good Read LED Duration

This parameter sets the amount of time the Good Read LED remains on following a good read.

@GRLDUR20  
**\*\* Short (20ms)**

@GRLDUR120  
**Medium (120ms)**

@GRLDUR220  
**Long (220ms)**

@GRLDUR320  
**Prolonged (320ms)**

@GRLDUR  
**Custom (1 - 2,500ms)**

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

**E**  
*example*

**Set the Good Read LED duration to 800ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom** barcode.
3. Scan the numeric barcodes "8", "0" and "0" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Exit Setup** barcode.

## Power On Beep

The scanner can be programmed to beep when it is powered on. Scan the **Off** barcode if you do not want a power on beep.

@PWBENA1

**\*\* On**

@PWBENA0

**Off**

## Good Read Beep

Scanning the **Off** barcode can turn off the beep that indicates successful decode; scanning the **On** barcode can turn it back on.

@GRBENA1

**\*\* On**

@GRBENA0

**Off**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Good Read Beep Duration

This parameter sets the length of the beep the scanner emits on a good read. It is programmable in 1ms increments from 20ms to 300ms.

@GRBDUR40

**Short (40ms)**

@GRBDUR80

**\*\* Medium (80ms)**

@GRBDUR120

**Long (120ms)**

@GRBDUR

**Custom (20 – 300ms)**

**E**  
*xample*

### Set the Good Read Beep duration to 200ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom** barcode.
3. Scan the numeric barcodes “2”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Good Read Beep Frequency

This parameter is programmable in 1Hz increments from 20Hz to 20,000Hz.

@GRBFRQ800

**Extra Low (800Hz)**

@GRBFRQ1600

**Low (1600Hz)**

@GRBFRQ2730

**\*\* Medium (2730Hz)**

@GRBFRQ4200

**High (4200Hz)**

@GRBFRQ

**Custom (20 - 20,000Hz)**

## **E** *sample*

**Set the Good Read Beep frequency to 2,000Hz:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom** barcode.
3. Scan the numeric barcodes "2", "0", "0" and "0" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
**Enter Setup**

---

## Good Read Beep Volume

@GRBVOL0  
**\*\* Loud**

@GRBVOL1  
**Medium**

@GRBVOL2  
**Low**

## Good Read Vibration

You may choose whether or not to let the scanner vibrate when a barcode is successfully read by scanning the appropriate barcode below.

@GRVENA1  
**On**

@GRVENA0  
**\*\* Off**

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Good Read Vibration Duration

This parameter sets the length for the Good Read Vibration. It is programmable in 1ms increments from 1ms to 2,500ms. The default setting is 100ms.

@GRVDUR40

**Short (40ms)**

@GRVDUR80

**Medium (80ms)**

@GRVDUR120

**Long (120ms)**

@GRVDUR

**Custom (1 – 2,500ms)**

**E**  
*example*

**Set the Good Read Vibration duration to 200ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom** barcode.
3. Scan the numeric barcodes “2”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Scan Mode

**Level Mode:** A trigger pull activates a decode session. The decode session continues until a barcode is decoded or you release the trigger.

**Sense Mode:** The scanner activates a decode session every time it detects a barcode presented to it. The decode session continues until a barcode is decoded or the decode session timeout expires. **Reread Timeout** can avoid undesired rereading of same barcode in a given period of time. **Sensitivity** can change the Sense Mode's sensibility to changes in images captured. **Image Stabilization Timeout** gives the scanner time to adapt to ambient environment after it decodes a barcode and "looks" for another.

**Continuous Mode:** The scanner automatically starts one decode session after another. To suspend/resume barcode reading, simply press the trigger. **Reread Timeout** can avoid undesired rereading of same barcode in a given period of time.

**Batch Mode:** A trigger pull activates a round of multiple decode sessions. This round of multiple scans continues until you release the trigger. Rereading the same barcode is not allowed in the same round.

**Pre-aiming Mode:** The user picks up the scanner and swiftly targets a barcode with the aid of the aimer (needless to consider its setting), before pulling the trigger to activate a decode session. The decode session continues until the barcode is decoded or the user releases the trigger. The aimer acts upon its setting 3 seconds after the user puts down the scanner.

@SCNMOD0

\*\* Level Mode

@SCNMOD2

---

## Decode Session Timeout

This parameter sets the maximum time decode session continues during a scan attempt. It is programmable in 1ms increments from 100ms to 3,600,000ms. When it is set to 0, the timeout is infinite. The default setting is 3,000ms.

@ORTSET

**Decode Session Timeout**

**E**  
*sample*

**Set the decode session timeout to 1,500ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Decode Session Timeout** barcode.
3. Scan the numeric barcodes “1”, “5”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Image Stabilization Timeout (Sense Mode)

This parameter defines the amount of time the scanner will spend adapting to ambient environment after it decodes a barcode and “looks” for another. It is programmable in 1ms increments from 0ms to 3,000ms. The default setting is 200ms.

@SENIST

**Image Stabilization Timeout**

**E**  
*sample*

### Set the image stabilization timeout to 800ms:

1. Scan the **Enter Setup** barcode.
2. Scan the **Image Stabilization Timeout** barcode.
3. Scan the numeric barcodes “8”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Reread Timeout

Reread Timeout can avoid undesired rereading of same barcode in a given period of time. This feature is only applicable to the Sense and Continuous modes.

**Enable Reread Timeout:** Do not allow the scanner to reread same barcode before the reread timeout expires.

**Disable Reread Timeout:** Allow the scanner to reread same barcode.

@RRDENA1

**Enable Reread Timeout**

@RRDENA0

**\*\* Disable Reread Timeout**

The following parameter sets the time interval between two successive reads on same barcode. It is programmable in 1ms increments from 0ms to 3,600,000ms. When it is set to a value greater than 3,000, the timeout for rereading same programming barcode is limited to 3,000ms. The default setting is 1,500ms.

@RRDDUR

**Set Reread Timeout**

**E**  
*example*

**Set the reread timeout to 1,000ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Reread Timeout** barcode.
3. Scan the numeric barcodes "1", "0", "0" and "0" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

You may wish to restart the reread timeout when the scanner encounters the same barcode that was decoded in the last scan session before the reread timeout expires. To enable this feature, scan the **Reread Timeout Reset On** barcode. This feature is only effective when **Reread Timeout** is enabled.

@RRDREN1

**Reread Timeout Reset On**

@RRDREN0

**\*\* Reread Timeout Reset Off**

## Image Decoding Timeout

Image Decoding Timeout specifies the maximum time the scanner will spend decoding an image. This parameter is programmable in 1ms increments from 1ms to 3,000ms. The default timeout is 500ms.

@DETSET

**Image Decoding Timeout**

**E**  
*sample*

**Set the image decoding timeout to 1,000ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Image Decoding Timeout** barcode.
3. Scan the numeric barcodes “1”, “0”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Sensitivity (Sense Mode)

This specifies the degree of acuteness of the scanner's response to changes in images captured. There are 20 levels to choose from. The smaller the value, the higher the sensitivity and the lower requirement in image change to trigger the scanner. You can select an appropriate degree of sensitivity that fits your application environment. This feature is only applicable to the Sense mode.

@SENLVL14

**Low Sensitivity**

@SENLVL11

**Medium Sensitivity**

@SENLVL8

**High Sensitivity**

@SENLVL5

**\*\* Enhanced Sensitivity**

@SENLVL

**Custom Sensitivity (Level 1-20)**

**E**  
*xample*

**Set the sensitivity to Level 10:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom Sensitivity** barcode.
3. Scan the numeric barcodes "1" and "0" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Scanning Preference

**Normal Mode:** Select this mode when reading barcodes on paper.

**Screen Mode:** Select this mode when reading barcodes on the screen.

@EXPLVL0

\*\* Normal Mode

@EXPLVL2

Screen Mode

## Read Barcode On/Off

Sending the Read Barcode Off command `~<SOH>0000#SCNENA0;<ETX>` to the scanner can disable it from reading barcode, and the scanner is unable to scan barcode unless you send the Read Barcode On command `~<SOH>0000#SCNENA1;<ETX>` to it or power cycle it. By default, Read Barcode is On.

## Make a Beeping Sound

You may wish to force the scanner to beep upon a command sent from the host. A beeping sound is made to gain a user's attention to an error or other important event.

BEEPONxxxFyyyT (xxx: The desired frequency, 1-20,000Hz; yyy: The desired duration, 1-10,000ms)

**Example: Make a 50ms beep at 2,000Hz**

Enter: **7E 01 30 30 30 30 40 42 45 45 50 4F 4E 32 30 30 30 46 35 30 54 3B 03**  
(`~<SOH>0000#BEEPON2000F50T;<ETX>`)

Response: **02 01 30 30 30 30 40 42 45 45 50 4F 4E 32 30 30 30 46 35 30 54 06 3B 03**  
(`<STX><SOH>0000#BEEPON2000F50T<ACK>;<ETX>`)

@SETUPE0

\*\* Exit Setup

@SETUPE1  
Enter Setup

## Smart Stand Mode

After this feature is turned on, the scanner will switch from its current scan mode to the Sense mode when it is inserted in the stand, and it will operate in its previous scan mode when it is removed from the stand.

@SMTENA0  
Off

@SMTENA1  
\*\* On

## Decode Area

**Whole Area Decoding:** The scanner attempts to decode barcode(s) within its field of view, from the center to the periphery, and transmits the barcode that has been first decoded.

**Specific Area Decoding:** The scanner attempts to read barcode(s) within a specified decoding area and transmits the barcode that has been first decoded. This option allows the scanner to narrow its field of view to make sure it reads only those barcodes intended by the user. For instance, if multiple barcodes are placed closely together, specific area decoding in conjunction with appropriate pre-defined decoding area will insure that only the desired barcode is read.

**Acuscan:** The scanner only decodes the barcode aimed squarely by the aiming pattern. For those using a crosshair aiming pattern, only the barcode aimed by the center of crosshair will be decoded.

@SETUPE0  
\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

@CADENA0

**\*\* Whole Area Decoding**

@CADENA1

**Specific Area Decoding**

@CADENA2

**Acuscan**

If **Specific Area Decoding** is enabled, the scanner only reads barcodes that intersect the predefined decoding area.

The default decoding area is an area of 40% top, 60% bottom, 40% left and 60% right of the scanner's field of view

You can define the decoding area using the **Top of Decoding Area**, **Bottom of Decoding Area**, **Left of Decoding Area** and **Right of Decoding Area** barcodes as well as numeric barcode(s) that represent(s) a desired percentage (0-100). The value of Bottom must be greater than that of Top; the value of Right must be greater than that of Left.

@CADTOP

**Top of Decoding Area**

@CADBOT

**Bottom of Decoding Area**

@CADLEF

**Left of Decoding Area**

@CADRIG

**Right of Decoding Area**

## Bad Read Message

You may scan the appropriate barcode below to select whether or not to send a bad read message (user-programmable) when a good read does not occur before trigger release, or the decode session timeout expires.

@NGRENA0  
**\*\* Bad Read Message OFF**

@NGRENA1  
**Bad Read Message ON**

## Set Bad Read Message

A bad read message can contain up to 7 characters (HEX values from 0x00 to 0xFF). To set a bad read message, scan the **Set Bad Read Message** barcode, the numeric barcodes representing the hexadecimal values of desired character(s) and the **Save** barcode. The default setting is “NG”.

@NGRSET  
**Set Bad Read Message**

**E**  
*xample*

**Set the bad read message to “F” (HEX: 0x46):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Bad Read Message** barcode.
3. Scan the numeric barcodes “4” and “6” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Auto Power-Off Timeout

**Auto Power-Off Timeout** specifies the amount of time it takes before the scanner automatically powers off from inactivity.

@WLSAPO0

## Power Off/Battery Off

@PWROFF

**Power Off Scanner**

@TESTMD3

**Battery Off**

(For Long-term Storage/Shipping)

Note: After scanning the **Battery Off** barcode, you **MUST** insert the scanner in a powered cradle to exit battery protection mode before turning it on.

## Default Settings

### Factory Defaults

Scanning the **Reset Scanner/Reset Cradle** barcode can restore the scanner/cradle to the factory defaults.

You may need to reset your scanner/cradle when:

1. Scanner/cradle is not properly configured so that the scanner fails to decode barcodes or to communicate with the cradle.
2. you forget previous configuration and want to avoid its impact.
3. functions that are rarely used have been enabled for the time being.

@FACDEF

**Reset Scanner**

@BASDFD

**Reset Cradle**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Custom Defaults

Scanning the **Restore All Custom Defaults** barcode can reset all parameters on the scanner to the custom defaults.

Scanning the **Save as Custom Defaults** barcode can set the current settings as custom defaults.

Custom defaults are stored in the non-volatile memory.

@CUSSAV

**Save as Custom Defaults**

@CUSDEF

**Restore All Custom Defaults**

Restoring the scanner to the factory defaults will not remove the custom defaults from the scanner.

## Chapter 4 Wireless Communication

### Operating Modes

The scanner provides the following two operating modes:

**Bluetooth HID Mode** allows your scanner to communicate with a remote host using Bluetooth. You must first pair your scanner to the host before these two Bluetooth devices can communicate with each other. All features available for USB HID Keyboard are applicable to Bluetooth HID.

Note: The pairing information in the scanner and the current host need to be cleared before connecting with other Bluetooth devices.

Scanner scan Clear Pairing Info on Scanner barcode, and the host delete the pairing information.

**Cradle Mode** allows your scanner to communicate with a remote host by pairing with a cradle.

## **Batch Mode**

### **Batch Mode Options**

**Off:** The scanner attempts to transmit every barcode you scan. When you are out of service range, the scanned data will be lost.

**Automatic Batch Mode:** When in service range, the scanner attempts to transmit every barcode you scan. When out of range, the scanner stores the scanned data in the flash memory. Once you are back to service range, the scanner will automatically transmit the stored data and then remove it from the flash memory after transmission is done.

**Manual Batch Mode:** Scanned data will be stored in the flash memory no matter whether you are in service range or not. You may send the stored data to the host in the following ways: (i) press the Batch button on the cradle after inserting the scanner in cradle; or (ii) scan the **Transmit Stored Data** barcode. The scanner will automatically remove the stored data from the flash memory after transmission is done if the **Auto Clear Stored Data after Transmission** feature is turned on.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

@WLSBAT0

@WLSBAT2

**Manual Batch Mode**

### **Prevent Same Barcode Storage**

This feature is available only when scanning barcodes in the Automatic or Manual Batch mode.

**On:** The scanner discards the data and generates an error beep when encountering a barcode that has existed in the flash memory.

**Off:** The scanner stores the data when encountering a barcode that has existed in the flash memory.

@WLSSE0

**\*\* Off**

@WLSSE1

**On**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Batch Mode Transmit Delay

Sometimes when multiple barcodes stored in the flash memory are sent to the host, the transmission of those barcodes is too fast for the application to process. To program a transmit delay between barcodes, scan one of the following delays.

@WLSBTD0

**\*\* No Transmit Delay (0ms)**

@WLSBTD100

**Medium Transmit Delay (100ms)**

@WLSBTD

**Custom Transmit Delay (0-10,000ms)**

@WLSBTD50

**Short Transmit Delay (50ms)**

@WLSBTD150

**Long Transmit Delay (150ms)**

**E**  
*xample*

**Set the batch mode transmit delay to 200ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Custom Transmit Delay** barcode.
3. Scan the numeric barcodes “2”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
**Enter Setup**

---

### End of Transmission Message for Batch Mode

You may scan the appropriate barcode below to select whether or not to send an end of transmission message (user-programmable) to notify the host when transmission of all stored data is done. This feature is only available to data transmission initiated manually under the Manual Batch mode.

**\*\* End of Transmission Message Off**

**End of Transmission Message On**

An end of transmission message can contain up to 10 characters (HEX values from 0x00 to 0xFF). To set an end of transmission message, scan the **Set End of Transmission Message** barcode, the numeric barcodes representing the hexadecimal values of desired character(s) and the **Save** barcode. The default setting is "EOT".

**Set End of Transmission Message**

**E**  
*xample*

**Set the end of transmission message to "END" (HEX: 0x45, 0x4E, 0x44):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set End of Transmission Message** barcode.
3. Scan the numeric barcodes "4", "5", "4", "E", "4" and "4" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

### Transmit Stored Data

You may scan the barcode below to send the stored data in the flash memory to the host. This feature is only available to the Manual Batch mode.

@WLSSBT

**Transmit Stored Data**

### Auto Clear Stored Data after Transmission

You may scan the appropriate barcode below to choose whether to clear or keep the stored data in the flash memory after transmission. This feature is only available to the Manual Batch mode.

@WLSCLE0

**\*\* Off**

@WLSCLE1

**On**

### Query/Clear Stored Data in Flash

@WLSQFC

**Query the Number of Stored Barcodes**

@WLSCLF

**Clear All Stored Data**

---

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Retransmission

If the Transmission feature is on, the scanner awaits an ACK response from the host following a data packet transmission, and resends the packet when it receives a NAK response or the retransmission timeout expires. Note that Data Packing must be enabled for this feature to function (See the “Data Packing Options” in Chapter 9 to learn how to enable it).

@WLSRTE0

**\*\* Retransmission Off**

@WLSRTE1

**Retransmission On**

## Transmission Timeout

This specifies the amount of time the scanner waits for an ACK response from the host following a data packet transmission. It is programmable in 1ms increments from 200ms to 10,000ms. The default value is 200ms. Note that the Retransmission feature must be turned on for this to function.

@WLSRTT

**Set Transmission Timeout**

**E**  
*xample*

**Set the transmission timeout to 300ms:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Transmission Timeout** barcode.
3. Scan the numeric barcodes “3”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Retransmission Count

This parameter specifies the number of times the scanner resends a data packet when it awaits an ACK response from the host. The selection range is from 1 to 10 retransmissions. The default value is 3 (retransmissions). Note that the Retransmission feature must be turned on for this to function.

@WLSRTN

**Set Retransmission Count**

**E**  
*xample*

### Set the retransmission count to 5:

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Retransmission Timeout** barcode.
3. Scan the numeric barcodes “3”, “0” and “0” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

## Scanner(s) to Cradle Support

### Wireless Communication Modes

**Point-to-Point Mode:** Only one scanner can be paired to one cradle at a time.

**Multi-point to Single-point Mode:** Up to seven scanners can be paired to one cradle.

@BASMPM0

**\*\* Point-to-Point Mode**

@BASMPM1

**Multi-point to Single-point Mode**

### Clear Pairing Info on Scanner/Cradle

@BASCLP

**Clear Pairing Info on Cradle**

@WLSCLP

**Clear Pairing Info on Scanner**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Set Scanner Name

You may scan the below barcode to set the name of your scanner. The maximum length is 5 characters (HEX values from 0x20 to 0x7E). The default scanner name is "00000".

@WLSNAM

Scanner Name

**E**  
*sample*

If setting the scanner name as "0AB00":

1. Scan the Enter Setup barcode
2. Scan the Scanner Name barcode
3. Scan the numeric barcode "3" "0" "4" "1" "4" "2" from the "Digit Barcodes" section in Appendix
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix
5. Scan the Exit Setup barcode

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Set Date and Time

@WLSTMS

**Set Date and Time**

**E**  
*xample*

Set Date and Time to “202010210101”:

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Date and Time** barcode.
3. Scan the numeric barcodes “2”, “0”, “2”, “0”, “1”, “0”, “2”, “1”, “0”, “1”, “0”, “1”, “0” and “1” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Exit Setup** barcode.

## Query Current Date and Time

After scanning the barcode below, the current date and time in YYYYMMDDHHMMSS format will be sent to the host device.

For example, query result “20180205103011” means February 5<sup>th</sup> 2018 10:30:11.

@WLSTMQ

**Query Current Date and Time**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Time Stamp

You can select whether or not to send date & time before each scanned data by scanning the appropriate barcode below.

@WLSTSE0

**\*\* Do Not Send Time Stamp**

@WLSTSE1

**Send Time Stamp**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

### Set Time Stamp Format

@WLSTSF0

**\*\* Format 1: (YYYY/MM/DD,HH:MM:SS)**

(example: 2018/01/23,10:30:20)

@WLSTSF1

**Format 2: (DD/MM/YYYY,HH:MM:SS)**

(example: 23/01/2018,10:30:20)

@WLSTSF2

**Format 3: (MM/DD/YYYY,HH:MM:SS)**

(example: 01/23/2018,10:30:20)

@SETUPE0

**\*\* Exit Setup**

Enter Setup

# Chapter 5 RS-232 Interface

## Introduction

When the cradle is connected to the RS-232 port of a host device, you need to set communication parameters (including baud rate, parity check, data bit and stop bit) on the cradle to match the host device so that two devices can communicate with each other.

@INTERF0  
RS-232

## Baud Rate

Baud rate is the number of bits of data transmitted per second. Set the baud rate to match the host requirements.

@232BAD8  
\*\* 115200

@232BAD7  
57600

@232BAD6  
38400

@232BAD5  
19200

@232BAD4  
14400

@232BAD3  
9600

@SETUPE0  
\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

@232BAD2

**4800**

@232BAD1

**2400**

@232BAD0

**1200**

## Parity Check

Set the parity type to match the host requirements.

**Odd Parity:** If the data contains an odd number of 1 bits, the parity bit value is set to 0.

**Even Parity:** If the data contains an even number of 1 bits, the parity bit value is set to 0.

**None:** Select this option when no parity bit is required.

@232PAR0

**\*\* None**

@232PAR1

**Even Parity**

@232PAR2

**Odd Parity**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
Enter Setup

---

## Data Bit

Set the number of data bits to match the host requirements.

@232DAT1  
7 Data Bits

@232DAT0  
\*\* 8 Data Bits

## Stop Bit

The stop bit(s) at the end of each transmitted character marks the end of transmission of one character and prepares the receiving device for the next character in the serial data stream. Set the number of stop bits to match the host requirements.

@232STP0  
\*\* 1 Stop Bit

@232STP1  
2 Stop Bits

@SETUPE0  
\*\* Exit Setup

@SETUPE1  
Enter Setup

---

## Datalogic Magellan Aux-RS232

Scanning the following barcode to program the scanner for a Datalogic Magellan Aux-RS232 port configuration.

@INTERF14  
**Datalogic Magellan AUX-RS232**

Note: A specific data cable is necessary for the Datalogic Magellan Aux-RS232 port. Please contact salesperson to buy CBL-125R or CBL-128R cable

## Hardware Auto Flow Control

If CTS flow control is enabled, the cradle determines whether to transmit data based on CTS signal level. When CTS signal is at low level which means the serial port's cache memory of receiving device (such as PC) is full, the cradle stops sending data through serial port until CTS signal is set to high level by receiving device. If RTS flow control is enabled, whether the cradle receives data or not is dependent on RTS signal level. If the cradle is not ready for receiving, it will set RTS signal to low level. When sending device (such as PC) detects it, it will not send data to the cradle any more to prevent data loss.

If **No Flow Control** is selected, reception/transmission of serial data will not be influenced by RTS/CTS signal.

@232FLW0  
**\*\* No Flow Control**

@232FLW1  
**RTS Flow Control**

@232FLW2  
**CTS Flow Control**

@232FLW3  
**CTS/RTS Flow Control**

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

Before enabling this feature, make sure that RTS/CTS signal lines are contained in RS-232 cable.  
Without the signal lines, RS-232 communication errors will occur.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

## Chapter 6 USB Interface

### Introduction

There are four options for USB connection between the cradle and host device:

- ✧ USB HID Keyboard: The cradle's transmission is simulated as USB keyboard input with no need for command configuration or a driver. Barcode data could be entered by the virtual keyboard directly and it is also convenient for the host device to receive data.
- ✧ USB CDC: It is compliant with the standard USB CDC class specifications defined by the USB-IF and allows the host device to receive data in the way as a serial port does. A driver is needed when using this feature.
- ✧ HID POS (POS HID Barcode Scanner): It is based on the HID interface, with no need for a custom driver. It excels virtual keyboard and traditional RS-232 interface in transmission speed.
- ✧ IBM SurePOS: It conforms to IBM (now Toshiba Global Commerce Solutions) 4698 USB scanner interface specifications.

When the cradle is connected to both USB and RS-232 ports on a host device, it will select the USB connection by default.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## USB HID Keyboard

When the cradle is connected to the USB port on a host device, you can enable the USB HID Keyboard feature by scanning the barcode below. The cradle's transmission will be simulated as USB keyboard input. The Host receives keystrokes on the virtual keyboard. It works on a Plug and Play basis and no driver is required.

@INTERF3

**\*\* USB HID Keyboard**

If the host device allows keyboard input, then no extra software is needed for HID Keyboard input.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

## Emulate ALT+Keypad

When **Emulate ALT+Keypad** is turned on, any character whose ASCII value is greater than or equal to 0x20 is sent over the numeric keypad no matter which keyboard type is selected.

1. ALT Make
2. Enter the number corresponding to a desired character on the keypad.
3. ALT Break

After **Emulate ALT+Keypad ON** is selected, you need to choose the code page with which the barcodes were created and to turn **Unicode Encoding** On or Off depending on the encoding used by the application software.

@KBWALTO

\*\* Emulate ALT+Keypad OFF

@KBWALT1

Emulate ALT+Keypad ON

Since sending a character involves multiple keystroke emulations, this method appears less efficient.

Supposing **Emulate ALT+Keypad** is ON, **Unicode Encoding** is Off, **Code Page 1252 (West European Latin)** is selected, and **Emulate Keypad with Leading Zero** is Off, barcode data "ADF" (65/208/70) is sent as below:

"A" -- "ALT Make" + "065" + "ALT Break"

"D" -- "ALT Make" + "208" + "ALT Break"

"F" -- "ALT Make" + "070" + "ALT Break"

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

### Code Page

Code pages define the mapping of character codes to characters. If the data received does not display with the proper characters, it may be because the barcode being scanned was created using a code page that is different from the one the host program is expecting. If this is the case, select the code page with which the barcodes were created by scanning the appropriate barcode below. For PDF417, QR Code, Aztec and Data Matrix, besides setting the code page, you also need to set the character encoding in the “Character Encoding” section in Chapter 7. This feature is only effective when **Emulate ALT+Keypad** is turned on.

@KBWCPG0

**\*\* Code Page 1252 (West European Latin)**

@KBWCPG1

**Code Page 1251 (Cyrillic)**

@KBWCPG2

**Code Page 1250 (Central and East European Latin)**

@KBWCPG3

**Code Page 1253 (Greek)**

@KBWCPG9

**Code Page 936 (Simplified Chinese, GB2312, GBK)**

@KBWCPG10

**Code Page 950 (Traditional Chinese, Big5)**

@KBWCPG11

**Code Page 874 (Thai)**

@KBWCPG12

**Code Page 932 (Japanese, Shift-JIS)**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

### Unicode Encoding

Different host program may use different character encodings for handling incoming barcode data. For instance, Microsoft Office Word uses Unicode encoding and therefore you should turn **Unicode Encoding** on, whereas Microsoft Office Excel or Notepad uses Code Page encoding and therefore you should turn **Unicode Encoding** off. This feature is only effective when **Emulate ALT+Keypad** is turned on.

@KBWCPU0

\*\* Off

@KBWCPU1

On

### Emulate Keypad with Leading Zero

You may turn this feature on to send character sequences sent over the numeric keypad as ISO characters which have a leading zero. For example, ASCII A transmits as "ALT MAKE" 0065 "ALT BREAK". This feature is only effective when **Emulate ALT+Keypad** is enabled.

@KBWALZ1

\*\* On

@KBWALZ0

Off

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

## Function Key Mapping

When **Ctrl+ASCII Mode** is selected, function characters (0x00 - 0x1F) are sent as ASCII sequences.

@KBWFKM0

\*\* Disable

@KBWFKM1

Ctrl+ASCII Mode

@KBWFKM2

Alt+Keypad Mode

## Example

If **Ctrl+ASCII Mode** is selected and other parameters of USB HID Keyboard adopt factory defaults, barcode data “A<HT>(i.e. Horizontal Tab)F” (0x41/0x09/0x46) is sent as below:

“A” - Keystroke “A”.

<HT> - “Ctrl Make” + Keystroke “I” + “Ctrl Break”

“F” - Keystroke “F”

For some text editors, “Ctrl I” means italic convert. So the output may be “AF”.

If **Alt+Keypad Mode** is selected and other parameters of USB HID Keyboard adopt factory defaults, the data above is sent as below:

“A” - Keystroke “A”.

<HT> - “Alt Make” + Keystrokes “009” + “Alt Break”

“F” - Keystroke “F”

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

## Convert Case

You may scan the appropriate barcode below to convert all barcode data to your desired case.

@KBWCAS0

**\*\* No Case Conversion**

@KBWCAS1

**Convert All to Upper Case**

@KBWCAS2

**Convert All to Lower Case**

**E**  
*example*

When the **Convert All to Lower Case** feature is enabled, barcode data "AbC" is transmitted as "abc".

If **Emulate ALT+Keypad ON** is selected, **Convert All to Lower Case** and **Convert All to Upper Case** do not function.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
Enter Setup

## Emulate Numeric Keypad

**Do Not Emulate Numeric Keypad 1:** Sending a number (0-9) is emulated as keystroke(s) on main keyboard.

**Emulate Numeric Keypad 1:** Sending a number (0-9) is emulated as keystroke(s) on numeric keypad. The state of Num Lock on the simulated numeric keypad is determined by its equivalent on the host device. If Num Lock on the host device is turned off, the output of simulated numeric keypad is function key instead of number.

**Do Not Emulate Numeric Keypad 2:** Sending "+", "-", "\*", and "/" is emulated as keystroke(s) on main keyboard.

**Emulate Numeric Keypad 2:** Sending "+", "-", "\*", and "/" is emulated as keystroke(s) on numeric keypad.

**\*\* Do Not Emulate Numeric Keypad 1**

## USB CDC

If your cradle is connected to the USB port on a host device, the USB CDC feature allows the host device to receive data in the way as a serial port does. A driver is needed when using this feature. You may download it from our website at [www.newlandaidc.com](http://www.newlandaidc.com).

## HID POS (POS HID Barcode Scanner)

### Introduction

The HID-POS interface is recommended for new application programs. It can send up to 56 characters in a single USB report and appears more efficient than keyboard emulation.

Features:

1. HID based, no custom driver required.
2. Way more efficient in communication than keyboard emulation and traditional RS-232 interface.

@INTERF5

**USB HID-POS**

### Access the Cradle with Your Program

Use CreateFile to access the cradle as a HID device and then use ReadFile to deliver the scanned data to the application program. Use WriteFile to send data to the cradle.

For detailed information about USB and HID interfaces, go to [www.USB.org](http://www.USB.org).

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

### Acquire Scanned Data

After a barcode is decoded, the cradle sends an input report as below:

	Bit							
Byte	7	6	5	4	3	2	1	0
0	Report ID = 0x02							
1	Barcode Length							
2-57	Decoded Data (1-56)							
58-61	Reserved							
62	Newland Symbology Identifier or N/C: 0x00							
63	-	-	-	-	-	-	-	Decoded data continued

### Send Command to the Cradle

This output report is used to send commands to the cradle. All programming commands can be used.

	Bit							
Byte	7	6	5	4	3	2	1	0
0	Report ID = 0x04							
1	Length of command							
2-63	Command (1-62)

## Chapter 7 Symbologies

### Introduction

Every symbology (barcode type) has its own unique attributes. This chapter provides programming barcodes for configuring the scanner so that it can identify various symbologies. It is recommended to disable those that are rarely used to increase the efficiency of the scanner.

### Global Settings

#### Enable/Disable All Symbologies

If the **Disable All Symbologies** feature is enabled, the scanner will not be able to read any non-programming barcodes except the programming barcodes.

@ALLENA1  
Enable All Symbologies

@ALLENA0

## 1D Twin Code

1D twin code is two 1D barcodes of a symbology or of different symbologies paralleled vertically. Both barcodes must have similar specifications and be placed closely together.

There are 3 options for reading 1D twin code:

- ◇ **Single 1D Code Only:** Read either 1D code.
- ◇ **Twin 1D Code Only:** Read both 1D codes. Transmission sequence: upper 1D code followed by lower 1D code.
- ◇ **Both Single & Twin:** Read both 1D codes. If successful, transmit as twin 1D code only. Otherwise, try single 1D code only.

@A1DDOU0

**\*\* Single 1D Code Only**

## Code 128

### Restore Factory Defaults

@128DEF

**Restore the Factory Defaults of Code 128**

### Enable/Disable Code 128

@128ENA1

**\*\* Enable Code 128**

@128ENA0

**Disable Code 128**

If the scanner fails to identify Code 128 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Code 128** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Set Length Range for Code 128

The scanner can be configured to only decode Code 128 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

@128MIN

Set the Minimum Length (Default: 1)

@128MAX

Set the Maximum Length (Default: 127)

If minimum length is set to be greater than maximum length, the scanner only decodes Code 128 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 128 barcodes with that length are to be decoded.

**Set the scanner to decode Code 128 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2” from the “Digit Barcodes” section in Appendix.
7. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
8. Scan the **Exit Setup** barcode.

@SETUPE0

## 2-Digit Add-On Code

An EAN-8 barcode can be augmented with a two-digit add-on code to form a new one. In the example below, the part surrounded by blue dotted line is an EAN-8 barcode while the part circled by red dotted line is a two-digit add-on code.

@EA8AD20

\*\* Disable 2-Digit Add-On Code

@EA8AD21

Enable 2-Digit Add-On Code

**Disable 2-Digit Add-On Code:** The scanner decodes EAN-8 and ignores the add-on code when presented with an EAN-8 plus 2-digit add-on barcode. It can also decode EAN-8 barcodes without 2-digit add-on codes.

**Enable 2-Digit Add-On Code:** The scanner decodes a mix of EAN-8 barcodes with and without 2-digit add-on codes.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

### 5-Digit Add-On Code

An EAN-8 barcode can be augmented with a five-digit add-on code to form a new one. In the example below, the part surrounded by blue dotted line is an EAN-8 barcode while the part circled by red dotted line is a five-digit add-on code.

@EA8AD50

\*\* Disable 5-Digit Add-On Code

@EA8AD51

Enable 5-Digit Add-On Code

**Disable 5-Digit Add-On Code:** The scanner decodes EAN-8 and ignores the add-on code when presented with an EAN-8 plus 5-digit add-on barcode. It can also decode EAN-8 barcodes without 5-digit add-on codes.

**Enable 5-Digit Add-On Code:** The scanner decodes a mix of EAN-8 barcodes with and without 5-digit add-on codes.

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

### **Convert EAN-8 to EAN-13**

**Convert EAN-8 to EAN-13:** Convert EAN-8 decoded data to EAN-13 format before transmission. After conversion, the data follows EAN-13 format and is affected by EAN-13 programming selections (e.g., Check Character).

**Do Not Convert EAN-8 to EAN-13:** EAN-8 decoded data is transmitted as EAN-8 data, without conversion.

@EA8EXP0

**\*\* Do Not Convert EAN-8 to EAN-13**

@EA8EXP1

**Convert EAN-8 to EAN-13**

@SETUPE0

## Coupon

### UPC-A/EAN-13 with Extended Coupon Code

The following three types of coupon code + extended coupon code are supported:

- ✧ UPC-A (starting with “5”) + GS1-128
- ✧ UPC-A (starting with “5”) + GS1 Databar
- ✧ EAN-13 (starting with “99”) + GS1-128

Use the appropriate barcode below to enable or disable UPC-A/EAN-13 with Extended Coupon Code. When left on the default setting (**Off**), the scanner treats Coupon Codes and Extended Coupon Codes as single barcodes.

If you scan the **Allow Concatenation** code, when the scanner sees the coupon code and the extended coupon code in a single scan, it transmits both as separate symbologies. Otherwise, it transmits the first coupon code it reads.

If you scan the **Require Concatenation** code, the scanner must see and read the coupon code and extended coupon code in a single read to transmit the data. No data is output unless both codes are read.

@CPNENA0

\*\* Off

@CPNENA1

Allow Concatenation

@CPNENA2

Require Concatenation

When using the UPC-A Coupon feature, please ensure that **System Character** or **System Character & Country Code** is selected for the “Transmit UPC-A Preamble Character” feature.

@SETUPE0

\*\* Exit Setup

@SETUPE1

## Interleaved 2 of 5

### Restore Factory Defaults

@I25DEF

**Restore the Factory Defaults of Interleaved 2 of 5**

### Enable/Disable Interleaved 2 of 5

@I25ENA1

**\*\* Enable Interleaved 2 of 5**

@I25ENA0

**Disable Interleaved 2 of 5**

If the scanner fails to identify Interleaved 2 of 5 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable Interleaved 2 of 5** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
Enter Setup

## Set Length Range for Interleaved 2 of 5

The scanner can be configured to only decode Interleaved 2 of 5 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

@I25MIN  
Set the Minimum Length (Default: 1)

@I25MAX  
Set the Maximum Length (Default: 127)

If minimum length is set to be greater than maximum length, the scanner only decodes Interleaved 2 of 5 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Interleaved 2 of 5 barcodes with that length are to be decoded.

**Set the scanner to decode Interleaved 2 of 5 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2” from the “Digit Barcodes” section in Appendix.
7. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
8. Scan the **Exit Setup** barcode.

@SETUPE0  
\*\* Exit Setup

@SETUPE1

Enter Setup

## Check Character Verification

A check character is optional for Interleaved 2 of 5 and can be added as the last character. It is a calculated value used to verify the integrity of the data.

- ✧ **Disable:** The scanner transmits Interleaved 2 of 5 barcodes as is.
- ✧ **Do Not Transmit Check Character After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ✧ **Transmit Check Character After Verification:** The scanner checks the integrity of all Interleaved 2 of 5 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

Since Interleaved 2 of 5 must always have an even number of digits, a zero may need to be added as the first digit when the check character is added. The check character is automatically generated when making Interleaved 2 of 5 barcodes.

@I25CHK0

\*\* Disable

@I25CHK1

**Do Not Transmit Check Character After Verification**

@I25CHK2

**Transmit Check Character After Verification**

If the **Do Not Transmit Check Character After Verification** option is enabled, Interleaved 2 of 5 barcodes with a length that is less than the configured minimum length after having the check character excluded will not be decoded. (For example, when the **Do Not Transmit Check Character After Verification** option is enabled and the minimum length is set to 4, Interleaved 2 of 5 barcodes with a total length of 4 characters including the check character cannot be read.)

@CHPENA1

**Enable China Post 25**

@CHPENAO

**\*\* Disable China Post 25**

If the scanner fails to identify China Post 25 barcodes, you may first try this solution by scanning the **Enter Setup** barcode and then **Enable China Post 25** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
**Enter Setup**

## Set Length Range for China Post 25

The scanner can be configured to only decode China Post 25 barcodes with lengths that fall between (inclusive) the minimum and maximum lengths. To accomplish it, you need to set the minimum and maximum lengths.

@CHPMIN

**Set the Minimum Length (Default: 1)**

@CHPMAX

**Set the Maximum Length (Default: 127)**

If minimum length is set to be greater than maximum length, the scanner only decodes China Post 25 barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only China Post 25 barcodes with that length are to be decoded.

**Set the scanner to decode China Post 25 barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2” from the “Digit Barcodes” section in Appendix.
7. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
8. Scan the **Exit Setup** barcode.

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Check Character Verification

A check character is optional for China Post 25 and can be added as the last character. It is a calculated value used to verify the integrity of the data.

- ✧ **Disable:** The scanner transmits China Post 25 barcodes as is.
- ✧ **Do Not Transmit Check Character After Verification:** The scanner checks the integrity of all China Post 25 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted except the last digit, whereas those failing it will not be transmitted.
- ✧ **Transmit Check Character After Verification:** The scanner checks the integrity of all China Post 25 barcodes to verify that the data complies with the check character algorithm. Barcodes passing the check will be transmitted, whereas those failing it will not be transmitted.

@CHPCHK0

\*\* Disable

@CHPCHK1

**Do Not Transmit Check Character After Verification**

@16KMAX

Set the Maximum Length (Default: 127)

If minimum length is set to be greater than maximum length, the scanner only decodes Code 16K barcodes with either the minimum or maximum length. If minimum length is same as maximum length, only Code 16K barcodes with that length are to be decoded.

**Set the scanner to decode Code 16K barcodes containing between 8 and 12 characters:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set the Minimum Length** barcode.
3. Scan the numeric barcode “8” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Set the Maximum Length** barcode.
6. Scan the numeric barcodes “1” and “2” from the “Digit Barcodes” section in Appendix.
7. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
8. Scan the **Exit Setup** barcode.

## Chapter 8 Data Formatter

### Introduction

You may use the Data Formatter to modify the scanner's output. For example, you can use the Data Formatter to insert characters at certain points in barcode data or to suppress/ replace/ send certain characters in barcode data as it is scanned.

Normally, when you scan a barcode, it gets outputted automatically; however, when you create a format, you must use a "send" command (see the "Send Commands" section in this chapter) within the format programming to output data. Multiple data formats can be programmed into the scanner. The maximum size of all data formats created is 2048 characters. By default, the data formatter is disabled. Enable it when required. If you have changed data format settings, and wish to clear all formats and return to the factory defaults, scan the **Default Data Format** barcode below.

@DFMDEF

**Default Data Format**

### Add a Data Format

Data format is used to edit barcode data. When you create a data format, you must select one of the four labels (Format\_0, Format\_1, Format\_2 and Format\_3) for your data format, specify the application scope of data format (such as barcode type and data length) and include formatter commands. Multiple data formats may be created using the same label. When scanned data does not match your data format requirements, you will hear the non-match error beep (if the non-match error beep is ON).

There are two methods to program a data format: Programming with barcodes and programming with serial commands.

### Programming with Barcodes

The following explains how to program a data format by scanning the specific barcodes. Scanning any irrelevant barcode or failing to follow the setting procedure will result in programming failure. To find the alphanumeric barcodes needed to create a data format, see the "Digit Barcodes" section in Appendix.

**Step 1:** Scan the **Enter Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

**Step 2:** Scan the **Add Data Format** barcode.

@DFMADD

**Add Data Format**

**Step 3:** Select a label (Format\_0 or Format\_1 or Format\_2 or Format\_3).

Scan a numeric barcode **0** or **1** or **2** or **3** to label this data format Format\_0 or Format\_1 or Format\_2 or Format\_3.

**Step 4:** Select formatter command type.

Specify what type of formatter commands will be used. Scan a numeric barcode “6” to select formatter command type 6.

(See the “Formatter Command Type 6” section in this chapter for more information)

**Step 5:** Set interface type

Scan **999** for any interface type.

**Step 6:** Set Symbology ID Number

Refer to the “Symbology ID Number” section in Appendix and find the ID number of the symbology to which you want to apply the data format. Scan three numeric barcodes for the symbology ID number. If you wish to create a data format for all symbologies, scan **999**.

**Step 7:** Set barcode data length

Specify what length of data will be acceptable for this symbology. Scan the four numeric barcodes that represent the data length. 9999 is a universal number, indicating all lengths. For example, 32 characters should be entered as 0032.

**Step 8:** Enter formatter command

Refer to the “Formatter Command Type 6” section in this chapter. Scan the alphanumeric barcodes that represent the command you need to edit data. For example, when a command is F141, you should scan F141.

**Step 9:** Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix to save your data format.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

**Example:** Program a Format\_0 data format using formatter command type 6, Code 128 containing 10 characters applicable, send all characters followed by "A".

- |   |   |
|---|---|
| 1. Scan the <b>Enter Setup</b> barcode        | Enter the Setup mode                          |
| 2. Scan the <b>Add Data Format</b> barcode    | Add a data format                             |
| 3. Scan the <b>0</b> barcode                  | Select Format_0 as the label                  |
| 4. Scan the <b>6</b> barcode                  | Select formatter command type 6               |
| 5. Scan the <b>9</b> barcode three times      | All interface types applicable                |
| 6. Scan the barcodes <b>002</b>               | Only Code 128 applicable                      |
| 7. Scan the barcodes <b>0010</b>              | Only a length of 10 characters applicable     |
| 8. Scan the alphanumeric barcodes <b>F141</b> | Send all characters followed by "A" (HEX: 41) |
| 9. Scan the <b>Save</b> barcode               | Save the data format                          |

To streamline the programming process, you may as well generate a batch barcode by inputting the command (e.g. **@DFMADD069990020010F141;**) used to create a data format. See the "Use Batch Barcode" section in Chapter 10 to learn how to put a batch barcode into use.

When creating multiple data formats sharing a label, the formats are separated from each other by a vertical bar (|) in the batch command, e.g. **@DFMADD069990029999F141|069990039999F142|169990049999F143;**.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1  
Enter Setup

---

## Programming with Serial Commands

A data format can also be created by serial commands (HEX) sent from the host device. **All commands must be entered in uppercase letters.**

The syntax consists of the following elements:

**Prefix:** "~<SOH>0000" (HEX: **7E 01 30 30 30 30**), 6 characters.

**Storage type:** "@" (HEX: **40**) or "#" (HEX: **23**), 1 character. "@" means permanent setting which will not be lost by removing power from the scanner or rebooting it; "#" means temporary setting which will be lost by removing power from the scanner or rebooting it.

**Add Data Format Command:** "DFMADD" (HEX: **44 46 4D 41 44 44**), 6 characters.

**Data format label:** "0" (HEX: **30**) or "1" (HEX: **31**) or "2" (HEX: **32**) or "3" (HEX: **33**), 1 character. "0", "1", "2" and "3" represent Format\_0, Format\_1, Format\_2 and Format\_3 respectively.

**Formatter command type:** "6" (HEX: **36**), 1 character.

**Interface type:** "999" (HEX: **39 39 39**), 3 characters.

**Symbology ID Number:** The ID number of the symbology to which you want to apply the data format, 3 characters. 999 indicates all symbologies.

**Data length:** The length of data that will be acceptable for this symbology, 4 characters. 9999 indicates all lengths. For example, 32 characters should be entered as 0032.

**Formatter commands:** The command string used to edit data. For more information, see the "Formatter Command Type 6" section in this chapter.

**Suffix:** ";<ETX>" (HEX: **3B 03**), 2 characters.

**Example:** Program a Format\_0 data format using formatter command type 6, Code 128 containing 10 characters applicable, send all characters followed by "A".

Enter: **7E 01 30 30 30 30 40 44 46 4D 41 44 44 30 36 39 39 39 30 30 33 39 39 39 39 46 31 34 31 3B 03**  
(~<SOH>0000@DFMADD069990020010F141;<ETX>)

Response: **02 01 30 30 30 30 40 44 46 4D 41 44 44 30 36 39 39 39 30 30 33 39 39 39 39 46 31 34 31 06 3B 03**  
(<STX><SOH>0000@DFMADD069990020010F141<ACK>;<ETX>)

When creating multiple data formats sharing a label, the formats are separated from each other by a vertical bar (|) in the serial command.

**Example:** ~<SOH>0000@DFMADD069990020010F141|069990039999F142|069990049999F143;<ETX>

@SETUPE0  
\*\* Exit Setup

@SETUPE1

Enter Setup

---

## Enable/Disable Data Formatter

When Data Formatter is disabled, the barcode data is outputted to the host as read, including prefixes and suffixes.

@DFMENA0

**\*\* Disable Data Formatter**

You may wish to require the data to conform to a data format you have created. The following settings can be applied to your data format:

**Enable Data Formatter, Required, Keep Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

**Enable Data Formatter, Required, Drop Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Any data that does not match your data format requirements generates an error beep (if Non-Match Error Beep is turned ON) and the data in that barcode is not transmitted.

**Enable Data Formatter, Not Required, Keep Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted along with prefixes and suffixes (if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

**Enable Data Formatter, Not Required, Drop Prefix/Suffix:** Scanned data that meets your data format requirements is modified accordingly and gets outputted without prefixes and suffixes (even if prefix and suffix are enabled). Barcode data that does not match your data format requirements is transmitted as read along with prefixes and suffixes (if prefix and suffix are enabled).

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

@DFMENA1

**Enable Data Formatter, Required, Keep Prefix/Suffix**

@DFMENA2

**Enable Data Formatter, Required, Drop Prefix/Suffix**

@DFMENA3

**Enable Data Formatter, Not Required, Keep Prefix/Suffix**

@DFMENA4

**Enable Data Formatter, Not Required, Drop Prefix/Suffix**

## Non-Match Error Beep

If Non-Match Error Beep is turned ON, the scanner generates an error beep when a barcode is encountered that does not match your required data format.

@DFMTON0

**Non-Match Error Beep Off**

@DFMTON1

**\*\* Non-Match Error Beep On**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Data Format Selection

After enabling the Data Formatter, you can select a data format you want to use by scanning the appropriate barcode below.

@DFMUSE0

**\*\* Format\_0**

@DFMUSE1

**Format\_1**

@DFMUSE2

**Format\_2**

@DFMUSE3

**Format\_3**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Change Data Format for a Single Scan

You can switch between data formats for a single scan. The next barcode is scanned using the data format selected here, then reverts to the format you have selected above.

For example, you may have set your scanner to use the data format you saved as Format\_3. You can switch to Format\_1 for a single trigger pull by scanning the **Single Scan – Format\_1** barcode below. The next barcode that is scanned uses Format\_1, then reverts back to Format\_3.

Note: This setting will be lost by removing power from the scanner, or turning off/ rebooting the device.

@DFMSIN0

**Single Scan – Format\_0**

@DFMSIN2

**Single Scan – Format\_2**

@DFMSIN1

**Single Scan – Format\_1**

@DFMSIN3

**Single Scan – Format\_3**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

## Clear Data Format

There are two methods to remove data format created from your scanner:

Delete one data format: Scan the **Clear One** barcode, a numeric barcode (0-3) and the **Save** barcode. For example, to delete Format\_2, you should scan the **Clear One** barcode, the **2** barcode and the **Save** barcode

Delete all data formats: Scan the **Clear All** barcode.

@DFMCAL

Clear All

@DFMCLR

Clear One

## Query Data Formats

You may scan the appropriate barcode below to get the information of data format(s) created by you or preset by manufacturer. For instance, if you have added Format\_0 as per the example in the “Add a Data Format” section in this chapter, scanning the **Query Current Data Formats** barcode, you will get the result: **Data Format0:069990020010F141;**

@DFMQCU

Query Current Data Formats

@DFMQFA

Query Preset Data Formats

@SETUPE0

\*\* Exit Setup

Enter Setup

---

## Formatter Command Type 6

When working with the Data Formatter, a virtual cursor is moved along your input data string. The following commands are used to both move this cursor to different positions, and to select, replace, and insert data into the final output. For the hex value of ASCII characters involved in the commands, refer to the "ASCII Table" in Appendix.

### Send Commands

#### F1 Send all characters

Syntax=F1xx (xx: The insert character's hex value)

Include in the output message all of the characters from the input message, starting from current cursor position, followed by an insert character.

#### F2 Send a number of characters

Syntax=F2nxx (nn: The numeric value (00-99) for the number of characters; xx: The insert character's hex value)

Include in the output message a number of characters followed by an insert character. Start from the current cursor position and continue for "nn" characters or through the last character in the input message, followed by character "xx."

#### F2 Example: Send a number of characters

1234567890ABCDEFGHIJ

Send the first 10 characters from the barcode above, followed by a carriage return.

Command string: **F2100D**

F2 is the "Send a number of characters" command

10 is the number of characters to send

0D is the hex value for a CR

The data is output as: **1234567890**

**<CR>**

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

### F3 Send all characters up to a particular character

Syntax=F3ssxx (ss: The particular character's hex value; xx: The insert character's hex value)

Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the particular character "ss," followed by character "xx." The cursor is moved forward to the "ss" character.

### F3 Example: Send all characters up to a particular character

1234567890ABCDEFGHIJ

Using the barcode above, send all characters up to but not including "D," followed by a carriage return.

Command string: **F3440D**

F3 is the "Send all characters up to a particular character" command

44 is the hex value for a "D"

0D is the hex value for a CR

The data is output as: **1234567890ABC**

**<CR>**

@SETUPE0

\*\* Exit Setup

@SETUPE1  
Enter Setup

---

### **B9 Send all characters up to a particular string**

Syntax=B9nnns...s (nnnn: The length of the particular string; s...s: The hex value of each character in the particular string)

Include in the output message all characters from the input message, starting with the character at the current cursor position and continuing to, but not including, the particular string “s...s.” The cursor is moved forward to the beginning of the “s...s” string.

### **B9 Example: Send all characters up to a particular string**

1234567890ABCDEFGHIJ

Using the barcode above, send all characters up to but not including “AB.”

Command string: **B900024142**

B9 is the “Send all characters up to a particular string” command

0002 is the length of the particular string (2 characters)

41 is the hex value for a “A” (character in the string)

42 is the hex value for a “B” (character in the string)

The data is output as: **1234567890**

### **E9 Send all but the last characters**

Syntax=E9nn (nn: The numeric value (00-99) for the number of characters that will not be sent at the end of the message)

Include in the output message all but the last “nn” characters, starting from the current cursor position. The cursor is moved forward to one position past the last input message character included.

### **F4 Insert a character multiple times**

Syntax=F4xxnn (xx: The insert character’s hex value; nn: The numeric value (00-99) for the number of times it should be sent)

Send “xx” character “nn” times in the output message, leaving the cursor in the current position.

---

@SETUPE0  
**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

### E9 and F4 Example: Send all but the last characters, followed by 2 tabs

1234567890ABCDEFGHIJ

Send all characters except for the last 8 from the barcode above, followed by 2 tabs.

Command string: **E908F40902**

E9 is the "Send all but the last characters" command

08 is the number of characters at the end to ignore

F4 is the "Insert a character multiple times" command

09 is the hex value for a horizontal tab

02 is the number of time the tab character is sent

The data is output as: **1234567890AB<tab><tab>**

### B3 Insert symbology name

Insert the name of the barcode's symbology in the output message, without moving the cursor.

### B4 Insert barcode length

Insert the barcode's length in the output message, without moving the cursor. The length is expressed as a numeric string and does not include leading zeros.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

### B3 and B4 Example: Insert the symbology name and length

1234567890ABCDEFGHIJ

Send the symbology name and length before the barcode data from the barcode above. Break up these insertions with spaces. End with a carriage return.

Command string: **B3F42001B4F42001F10D**

B3 is the "Insert symbology name" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of time the space character is sent

B4 is the "Insert barcode length" command

F4 is the "Insert a character multiple times" command

20 is the hex value for a space

01 is the number of time the space character is sent

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **Code128 20 1234567890ABCDEFGHIJ**

**<CR>**

### Move Commands

#### F5 Move the cursor forward a number of characters

Syntax=F5nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved ahead)

Move the cursor ahead "nn" characters from current cursor position.

---

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

### F5 Example: Move the cursor forward and send the data

1234567890ABCDEFGHIJ

Move the cursor forward 3 characters, then send the rest of the barcode data from the barcode above. End with a carriage return.

Command string: **F503F10D**

F5 is the “Move the cursor forward a number of characters” command

03 is the number of characters to move the cursor

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **4567890ABCDEFGHIJ**

**<CR>**

### F6 Move the cursor backward a number of characters

Syntax=F6nn (nn: The numeric value (00-99) for the number of characters the cursor should be moved back)

Move the cursor back “nn” characters from current cursor position.

### F7 Move the cursor to the beginning

Syntax=F7

Move the cursor to the first character in the input message.

### EA Move the cursor to the end

Syntax=EA

Move the cursor to the last character in the input message.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

## Search Commands

### F8 Search forward for a character

Syntax = F8xx (xx: The search character's hex value)

Search the input message forward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

### F8 Example: Send barcode data that starts after a particular character

1234567890ABCDEFGHIJ

Search for the letter "D" in barcodes and send all the data that follows, including the "D". Using the barcode above:

Command string: **F844F10D**

F8 is the "Search forward for a character" command

44 is the hex value for "D"

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **DEFGHIJ**

**<CR>**

### F9 Search backward for a character

Syntax = F9xx (xx: The search character's hex value)

Search the input message backward for "xx" character from the current cursor position, leaving the cursor pointing to the "xx" character.

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

---

### B0 Search forward for a string

Syntax=B0nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search forward for “S” string from the current cursor position, leaving cursor pointing to “S” string. For example, B0000454657374 will search forward for the first occurrence of the 4-character string “Test.”

### B0 Example: Send barcode data that starts after a string of characters

1234567890ABCDEFGHIJ

Search for the letters “FGH” in barcodes and send all the data that follows, including “FGH.” Using the barcode above:

Command string: **B00003464748F10D**

B0 is the “Search forward for a string” command

0003 is the string length (3 characters)

46 is the hex value for “F”

47 is the hex value for “G”

48 is the hex value for “H”

F1 is the “Send all characters” command

0D is the hex value for a CR

The data is output as: **FGHIJ**

**<CR>**

### B1 Search backward for a string

Syntax=B1nnnnS (nnnn: The string length (up to 9999); S: The ASCII hex value of each character in the string)

Search backward for “S” string from the current cursor position, leaving cursor pointing to “S” string. For example, B1000454657374 will search backward for the first occurrence of the 4-character string “Test.”

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

### **E6 Search forward for a non-matching character**

Syntax=E6xx (xx: The search character's hex value)

Search the input message forward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

### **E6 Example: Remove zeros at the beginning of barcode data**

0000123abc

This example shows a barcode that has been zero filled. You may want to ignore the zeros and send all the data that follows. E6 searches forward for the first character that is not zero, then sends all the data after, followed by a carriage return. Using the barcode above:

Command string: **E630F10D**

E6 is the "Search forward for a non-matching character" command

30 is the hex value for 0

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **123abc**

**<CR>**

### **E7 Search backward for a non-matching character**

Syntax=E7xx(xx: The search character's hex value)

Search the input message backward for the first non-"xx" character from the current cursor position, leaving the cursor pointing to the non-"xx" character.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

## Comparison Command

### B2 string is compared with B@

Syntax= B2nnnnSS1SSn (nnnn: the length of character string, SS1- SSn: the hex value of character string)

The comparison starts from the right side of the current cursor position, and the cursor moves nnnn characters to the right. If the string within the cursor movement range is equal to SS1SSn, the instruction continues to execute; otherwise, it exits.

#### B2 example: Send data after the specified string of character

Test123456

The above barcode starts with the "Test" string, and requires the content of the Test string to be sent, and finally a carriage return.

Command string: B2000454657374F10D

B2 is the comparison of the character string" command

0004 is the string length (4 characters)

54 is the hex value for T

65 is the hex value for e

73 is the hex value for s

74 is the hex value for t

F1 is the "Send all characters" command

0D is the hex value of carriage return

The data is output as 123456<CR>

### EC Check if the character to the right of the cursor is number

This command takes no parameters. If the right side of the cursor is a non-numeric, the current command is exited, otherwise execution continues.

#### EC example: Send barcode data that starts with number characters

0000123abc

The above barcode starts with number characters, requires to send barcode data, and finally sends a carriage return

Command string: ECF10D

EC is the "Check if the character to the right of the cursor is a number" command

F1 is the "Send All Characters" command

0D is the hex value for CR

@SETUPE0

\*\* Exit Setup

@SETUPE1

### Enter Setup

---

The data is output as 0000123abc<CR>

#### **ED Check if the character to the right of the cursor is non-numeric**

This command takes no parameters. If the right side of the cursor is a number, the current command is exited, otherwise execution continues.

#### **ED example: Send barcode data that starts with non-numeric characters**

Test123456

The above barcode starts with non-numeric characters, requires to send barcode data, and finally sends a carriage return

Command string: EDF10D

EC is the "Check if the character to the right of the cursor is a number" command

F1 is the "Send All Characters" command

0D is the hex value of carriage return

The data is output as Test123456 <CR>

#### **FE Character Comparison**

Syntax = FExx (xx is the hex value of the character)

If the character to the right of the current cursor position is xx, execution continues; otherwise exit.

#### **FE example: The example is a barcode that starts with the character "1" and send the first 6 bytes of the barcode.**

1234567890ABCDEFGHIJ

The above barcode starts with the character "1", and requires to send the character "1" and the next 5 characters

Command string: FE31F7F2060D

FE is the "Character Compare" command

31 is the hex of the character "1"

F7 is the "Move cursor to starting position" command

F2 is the "Send several characters" command

06 is the "Send character length"

0D is the hex value of carriage return

The data is output as 123456 <CR>

@SETUPE0

### \*\* Exit Setup

@SETUPE1

Enter Setup

---

## Miscellaneous Commands

### FB Suppress characters

Syntax = FBnnxyy..zz (nn: The numeric value (00-15) for the number of suppressed characters; xyy..zz: The hex value of the characters to be suppressed)

Suppress all occurrences of up to 15 different characters, starting at the current cursor position, as the cursor is advanced by other commands.

#### FB Example: Remove spaces in barcode data

12 34\_5\*6 78

This example shows a barcode that has spaces in the data. You may want to remove the spaces before sending the data. Using the barcode above:

Command string: **FB0120F10D**

FB is the "Suppress characters" command

01 is the number of the characters to be suppressed

20 is the hex value for a space

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **1234\_5\*678**

**<CR>**

### E4 Replace characters

Syntax = E4nnxx<sub>1</sub>xx<sub>2</sub>yy<sub>1</sub>yy<sub>2</sub>...zz<sub>1</sub>zz<sub>2</sub>(nn: The total count of the number of characters (characters to be replaced plus replacement characters; xx<sub>1</sub>: The characters to be replaced, xx<sub>2</sub>: The replacement characters, continuing through zz<sub>1</sub> and zz<sub>2</sub>)

Replace up to 15 characters in the output message, without moving the cursor.

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

#### **E4 Example: Replace zeros with CRs in barcode data**

12304560780AB

If the barcode has characters that the host application does not want included, you can use the E4 command to replace those characters with something else. In this example, you will replace the zeros in the barcode above with carriage returns.

Command string: **E402300DF10D**

E4 is the "Replace characters" command

02 is the total count of characters to be replaced, plus the replacement characters (0 is replaced by CR, so total characters=2)

30 is the hex value for 0

0D is the hex value for a CR (the character that will replace the 0)

F1 is the "Send all characters" command

0D is the hex value for a CR

The data is output as: **123**

**456**

**78**

**AB**

**<CR>**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

### BA Replace a string with another

Syntax = BAnnNN<sub>1</sub>SS<sub>1</sub>NN<sub>2</sub>SS<sub>2</sub>

nn: The count of replacements to be made, if nn=00 or nn>=the number of occurrences of a string to be replaced, then replace all occurrences of that string.

NN<sub>1</sub>: The length of the string to be replaced, NN<sub>1</sub>>0.

SS<sub>1</sub>: The ASCII hex value of each character in the string to be replaced.

NN<sub>2</sub>: The length of replacement string, NN<sub>2</sub>>=0. To replace string "SS<sub>1</sub>" with NUL (i.e. delete string "SS<sub>1</sub>"), you should set NN<sub>2</sub> to 00 and leave out SS<sub>2</sub>.

SS<sub>2</sub>: The ASCII hex value of each character in the replacement string.

From the current cursor position, search forward for the occurrence of "SS<sub>1</sub>" string (of length "NN<sub>1</sub>") and replace the string with "SS<sub>2</sub>" string (of length "NN<sub>2</sub>") in the output message until every "SS<sub>1</sub>" string is replaced or the count of replacements made reaches "nn" times, without moving the cursor.

### BA Example: Replace "23"s with "ABC"s in barcode data

1234Abc23R0123U

If the barcode has a string of characters that the host application does not want included, you can use the BA command to replace the string with something else. In this example, you will replace the "23"s in the barcode above with "ABC"s.

Command string: **BA0002323303414243F100**

BA is the "Replace a string with another" command

00 is the count of replacements to be made, 00 means to replace all occurrences of that string

02 is the length of the string to be replaced

32 is the hex value for 2 (character in the string to be replaced)

33 is the hex value for 3 (character in the string to be replaced)

03 is the length of the replacement string

@SETUPE0

\*\* Exit Setup

@SETUPE1

## Enter Setup

---

41 is the hex value for A (character in the replacement string)

42 is the hex value for B (character in the replacement string)

43 is the hex value for C (character in the replacement string)

F1 is the "Send all characters" command

00 is the hex value for a NUL

The data is output as: **1ABC4AbcABCR01ABCU**

### **BA Example: Remove only the first occurrence of "23"s in barcode data**

If the barcode has a string of characters that the host application wants removed, you can use the BA command to replace the string with NUL. In this example, you will remove the first occurrence of "23" in the barcode above.

Command string: **BA0102323300F100**

BA is the "Replace a string with another" command

01 is the count of replacements to be made

02 is the length of the string to be replaced

32 is the hex value for 2 (character in the string to be replaced)

33 is the hex value for 3 (character in the string to be replaced)

00 is the length of the replacement string, 00 means to replace the string to be replaced with NUL

F1 is the "Send all characters" command

00 is the hex value for a NUL

The data is output as: **14Abc23R0123U**

@SETUPE0

## \*\* Exit Setup

@SETUPE1

Enter Setup

---

### EF Insert a delay

Syntax = EFnnnn (nnnn: The delay in 5ms increments, up to 9999)

Inserts a delay of up to 49,995 milliseconds (in multiples of 5), starting from the current cursor position. This command can only be used with USB HID Keyboard.

### EF Example: Insert a delay of 1s between the 5<sup>th</sup> and 6<sup>th</sup> character

Send the first 5 characters in a barcode, wait for 1s, then send the rest of the barcode data.

Command string: **F20500EF0200E900**

F2 is the "Send a number of characters" command

05 is the number of characters to send

00 is the hex value for a Null character

EF is the "Insert a delay" command

0200 is the delay value (5msX200=1000ms=1s)

E9 is the "Send all but the last characters" command

00 is the number of characters that will not be sent at the end of the message

@SETUPE0

\*\* Exit Setup

@SETUPE1

## Enter Setup

---

### B5 Insert key strokes

Syntax=B5nnssxx (nn: The number of keys pressed (without key modifiers); ss: the key modifier from the table below; xx: the key number from the “Unicode Key Maps” in Appendix.)

Insert a key stroke or combination of key strokes. Key strokes are dependent on your keyboard (see the “Unicode Key Maps” in Appendix). This command can only be used with USB HID Keyboard.

Key Modifiers	
No Key Modifier	00
Shift Left	01
Shift Right	02
Alt Left	04
Alt Right	08
Control Left	10
Control Right	20

For example, B501001F inserts an “a” on a U.S. style keyboard. B5 = the command, 01 = number of keys pressed (without the key modifier), 00 is No Key Modifier, and 1F is the “a” key. If an “A” were to be inserted, B501011F or B501021F would be entered.

If there are two keystrokes, the syntax would change from Syntax=B5nnssxx for one keystroke to Syntax=B5nnssxxssxx. An example that would insert “aA” is as follows: B502001F011F.

Note: Key modifiers can be added together when needed. Example: Shift Left + Alt Left + Control Left =15.

@SETUPE0

## \*\* Exit Setup

@SETUPE1

## Chapter 9 Prefix&Suffix

### Introduction

A 1D barcode could contain digits, letters, symbols, etc. A 2D barcode could contain more data, such as Chinese characters and other multi-byte characters. However, in real applications, they do not and should not have all information we need, such as barcode type, data acquisition time and delimiter, in order to keep the barcodes short and flexible.

Prefix and suffix are how to fulfill the needs mentioned above. They can be added, removed and modified while the original barcode data remains intact.

Barcode processing procedure:

1. Edit data with Data Formatter
2. Append prefix/suffix
3. Pack data
4. Append terminating character

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

## Global Settings

### Enable/Disable All Prefixes/Suffixes

**Disable All Prefixes/Suffixes:** Transmit barcode data with no prefix/suffix.

**Enable All Prefixes/Suffixes:** Allow to append Code ID prefix, AIM ID prefix, custom prefix/suffix and terminating character to the barcode data before the transmission.

@APSENA0

Disable All Prefixes/Suffixes

@APSENA1

Enable All Prefixes/Suffixes

## Prefix Sequence

@PRESEQ0

\*\* Code ID+ Custom +AIM ID

@PRESEQ1

Custom + Code ID + AIM ID

@SETUPE0

\*\* Exit Setup

@SETUPE1

Enter Setup

## Custom Prefix

### Enable/Disable Custom Prefix

If custom prefix is enabled, you are allowed to append to the data a user-defined prefix that cannot exceed 10 characters. For example, if the custom prefix is “AB” and the barcode data is “123”, the Host will receive “AB123”.

@CPRENA0

\*\* Disable Custom Prefix

@CPRENA1

Enable Custom Prefix

### Set Custom Prefix

To set a custom prefix, scan the **Set Custom Prefix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired prefix then the **Save** barcode.

**Note:** A custom prefix cannot exceed 10 characters.

@CPRSET

Set Custom Prefix

**E**  
*xample*

Set the custom prefix to “CODE” (HEX: 0x43/0x4F/0x44/0x45):

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Prefix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Enable Custom Prefix** barcode.
6. Scan the **Exit Setup** barcode.

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

## AIM ID Prefix

AIM (Automatic Identification Manufacturers) ID defines symbology identifier (For the details, see the “AIM ID Table” section in Appendix). If AIM ID prefix is enabled, the scanner will add the symbology identifier before the scanned data after decoding.

@AIDENA0

**\*\* Disable AIM ID Prefix**

@AIDENA1

**Enable AIM ID Prefix**

AIM ID is not user programmable.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

**Enter Setup**

---

## Code ID Prefix

Code ID can also be used to identify barcode type. Unlike AIM ID, Code ID is user programmable. Code ID can only consist of one or two English letters.

@CIDENA0

**\*\* Disable Code ID Prefix**

@CIDENA1

**Enable Code ID Prefix**

## Restore All Default Code IDs

For the information of default Code IDs, see the “Code ID Table” section in Appendix.

@CIDDEF

**Restore All Default Code IDs**

## Modify Code ID

See the examples below to learn how to modify a Code ID and restore the default Code IDs of all symbologies.

## Custom Suffix

### Enable/Disable Custom Suffix

If custom suffix is enabled, you are allowed to append to the data a user-defined suffix that cannot exceed 10 characters. For example, if the custom suffix is “AB” and the barcode data is “123”, the Host will receive “123AB”.

@CSUENA0  
\*\* Disable Custom Suffix

@CSUENA1  
Enable Custom Suffix

### Set Custom Suffix

To set a custom suffix, scan the **Set Custom Suffix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired suffix then the **Save** barcode.

**Note:** A custom suffix cannot exceed 10 characters.

@CSUSET  
Set Custom Suffix

**E**  
*sample*

**Set the custom suffix to “CODE” (HEX: 0x43/0x4F/0x44/0x45):**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Custom Suffix** barcode.
3. Scan the numeric barcodes “4”, “3”, “4”, “F”, “4”, “4”, “4” and “5” from the “Digit Barcodes” section in Appendix.
4. Scan the **Save** barcode from the “Save/Cancel Barcodes” section in Appendix.
5. Scan the **Enable Custom Suffix** barcode.
6. Scan the **Exit Setup** barcode.

@SETUPE0  
\*\* Exit Setup

@SETUPE1

Enter Setup

---

## Data Packing

### Introduction

Data packing is designed for a specific group of users who want to have the data packed before transmission. Data packing influences data format, so it is advised to disable this feature when it is not required.

### Data Packing Options

**Disable Data Packing:** Transmit decoded data in raw format (unpacked).

**Enable Data Packing, Format 1:** Transmit decoded data with the packet format 1 defined below.

Packet format 1: [STX + ATTR + LEN] + [AL\_TYPE + DATA] + [LRC]

STX: 0x02

ATTR: 0x00

LEN: Barcode data length is expressed in 2 bytes ranging from 0x0000 (0) to 0xFFFF (65535).

AL\_TYPE: 0x36

DATA: Raw barcode data.

LRC: Check digit.

LRC calculation algorithm: computation sequence: 0xFF+LEN+AL\_TYPE+DATA; computation method is XOR, byte by byte.

**Enable Data Packing, Format 2:** Transmit decoded data with the packet format 2 defined below.

Packet format 2: [STX + ATTR + LEN] + [AL\_TYPE] + [Symbology\_ID + DATA] + [LRC]

STX: 0x02

ATTR: 0x00

LEN: Barcode data length is expressed in 2 bytes ranging from 0x0000 (0) to 0xFFFF (65535).

AL\_TYPE: 0x3B

Symbology\_ID: The ID number of symbology, 1 byte.

DATA: Raw barcode data.

LRC: Check digit.

LRC calculation algorithm: computation sequence: 0xFF+LEN+AL\_TYPE+Symbology\_ID+DATA; computation method is XOR, byte by byte.

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

@PACKAG0

**\*\* Disable Data Packing**

@PACKAG1

**Enable Data Packing, Format 1**

@PACKAG2

**Enable Data Packing, Format 2**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Terminating Character Suffix

### Enable/Disable Terminating Character Suffix

A terminating character such as carriage return (CR) or carriage return/line feed pair (CRLF) can only be used to mark the end of data, which means nothing can be added after it.

@TSUENAO

Disable Terminating Character Suffix

@TSUENA1

\*\* Enable Terminating Character Suffix

### Set Terminating Character Suffix

To set a terminating character suffix, scan the **Set Terminating Character Suffix** barcode then the numeric barcodes corresponding to the hexadecimal value of a desired terminating character then the **Save** barcode.

**Note:** A terminating character suffix cannot exceed 2 characters.

@TSUSET

Set Terminating Character Suffix

@TSUSET0D

\*\* Set Terminating Character to CR (0x0D)

@TSUSET0D0A

Set Terminating Character to CRLF (0x0D,0x0A)

@SETUPE0

\*\* Exit Setup

@SETUPE1

**Enter Setup**

---

**E**  
*sample*

**Set the terminating character suffix to 0x0A:**

1. Scan the **Enter Setup** barcode.
2. Scan the **Set Terminating Character Suffix** barcode.
3. Scan the numeric barcodes "0" and "A" from the "Digit Barcodes" section in Appendix.
4. Scan the **Save** barcode from the "Save/Cancel Barcodes" section in Appendix.
5. Scan the **Enable Terminating Character Suffix** barcode.
6. Scan the **Exit Setup** barcode.

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

## Chapter 10 Batch Programming

### Introduction

Batch programming enables users to integrate a batch of commands into a single batch barcode.

Listed below are batch programming rules:

1. Command format: Command + Parameter Value.
2. Each command is terminated by a semicolon (;). Note that there is no space between a command and its terminator semicolon.
3. Use the barcode generator software to generate a 2D batch barcode.

Example: Create a batch barcode for **Normal Illumination, Sense Mode, Decode Session Timeout = 2s, Disable Interleaved 2 of 5:**

1. Input the commands:

@ILLSCN1;SCNMOD2;ORTSET2000;I25ENA0;

2. Generate a batch barcode.

When setting up a scanner with the above configuration, scan the **Enable Batch Barcode** barcode and then the batch barcode generated.

@BATCHS

**Enable Batch Barcode**

@SETUPE0

**\*\* Exit Setup**

@SETUPE1

Enter Setup

---

## Create a Batch Command

A batch command may contain a number of individual commands each of which is terminated by a semicolon (;).

For more information, refer to the “Use of Programming Command” section in Chapter 3.

## Create a Batch Barcode

Batch barcodes can be produced in the format of PDF417, QR Code or Data Matrix.

Example: Create a batch barcode for **Normal Illumination, Sense Mode, Decode Session Timeout = 2s, Disable Interleaved 2 of 5:**

1. Input the following commands:

```
@ILLSCN1;SCNMOD2;ORTSET2000;I25ENA0;
```

2. Generate a PDF417 batch barcode.

@SETUPE0

\*\* Exit Setup

## Use Batch Barcode

To put a batch barcode into use, scan the following barcodes. (Use the example above.)

# Appendix

---

## Save/Cancel Barcodes

After reading numeric barcode(s), you need to scan the **Save** barcode to save the data. If you scan the wrong digit(s), you can either scan the **Cancel** barcode and then start the configuration all over again, or scan the **Delete the Last Digit** barcode and then the correct digit, or scan the **Delete All Digits** barcode and then the digits you want.

For instance, after reading the **Maximum Length** barcode and numeric barcodes “1”, “2” and “3”, you scan:

- ✧ **Delete the Last Digit:** The last digit “3” will be removed.
- ✧ **Delete All Digits:** All digits “123” will be removed.
- ✧ **Cancel:** The maximum length configuration will be cancelled. And the scanner is still in the setup mode.

## Factory Defaults Table

Parameter	Factory Default	Remark
<b>System Settings</b>		
Barcode Programming	Disabled (Exit Setup)	
Programming Barcode Data	Do not transmit
